DETAILED ACTION

1. Applicant's amendment and accompanying remarks filed April 28, 2006 have been acknowledged.
2. Examiner acknowledges amended claim 1.
3. Examiner acknowledges cancelled claims 2-3.
4. Examiner acknowledges newly added claims 21-22.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1, 5-10, 14 and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Ichimura et al., U.S. Patent Number 6,337,167.

Ichimura discloses a chemical compound with the structure

Ar¹ to Ar⁴ can be

General formula (7):

wherein n is an integer from 0 to 5 (see columns 6 and 7). The reference reads on the instant claims when the electron donor group is an unsubstituted triphenylamine when n is 0; the

conjugated bridging element is and the electron acceptor group is a para-dicycno phenyl. The reference also discloses that R^{61} is a hydrocarbon group with 1 to 4 carbon atoms (methyl) as per instant claim 5 when n is 1. The reference also discloses that the chemical compound can be used in an electroluminescent display device.

7. Claims 1 and 4-9 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 05-281761.

The Japanese reference discloses a compound with the structure

The reference reads on the instant claims when

Art Unit: 1774

is an electron donor group; the bridging element is

and the electron acceptor group is a fused cyclic ring such as carbazole.

8. Claims 1, 6-9, 11, 14 and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 10-161329.

The Japanese reference discloses a compound with the structure

Art Unit: 1774

The reference reads on the instant claims when the electron donor group is the fused cyclic ring; the bridging element comprising a pi-bridging element is the phenyl group and the electron

acceptor group is

Claims 12-13 and 15-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art does not provide for the recited chemical compound, further including the compound being selected from the group consisting of the following compounds of formulas 4a through 4c:

Art Unit: 1774

[Formula 4a]

[Formula 4b]

[Formula 4c]

The prior art does not provide for the recited compound, further including the compound being selected from the group consisting of the following compounds of formula 5a through 5c:

Art Unit: 1774

wherein n is a number ranging from 100 to 2,000. Also, the prior art does not provide for the recited chemical compound, further including the conjugated bridging element is a polymer having a main chain and a branched or side chain having an alkyl group or an alkoxy group. The prior art does not provide for a photoluminescence quenching device comprising the recited chemical compound wherein the device comprises a layer of polyethylenedioxythiophene/polystyrenesulfonic acid and an emitter polymer layer having a material selected from the group consisting of the following compounds:

Art Unit: 1774

wherein n is a number ranging from 100 to 2,000. Also, the prior art does not provide for a photoluminescence quenching device comprising the recited compound.

Response to Arguments

9. Applicant's arguments filed April 28, 2006 have been fully considered but they are not persuasive. Applicant argues that the Ichimura reference does not read on the instant claims. Ichimura reads on instant claim when the electron donor group is an unsubstituted triphenylamine as disclosed in columns 6 and 7 of the reference. Also, applicant argues that the reference does not read on instant claim 5. The reference reads on instant claim 5 when n is 1 and R⁶¹ is methyl. Applicant argues that claim 10 is dependent upon claim 9. In the previous office action, examiner inadvertently objected to claim 9 rather than to reject claim 9. The Ichimura reference discloses a para-dicyanophenyl (disubstituted phenyl) as the electron acceptor group. Due to claim 9 being inadvertently left out of the rejection, this action is NON-FINAL.
